

# Cam Pac®

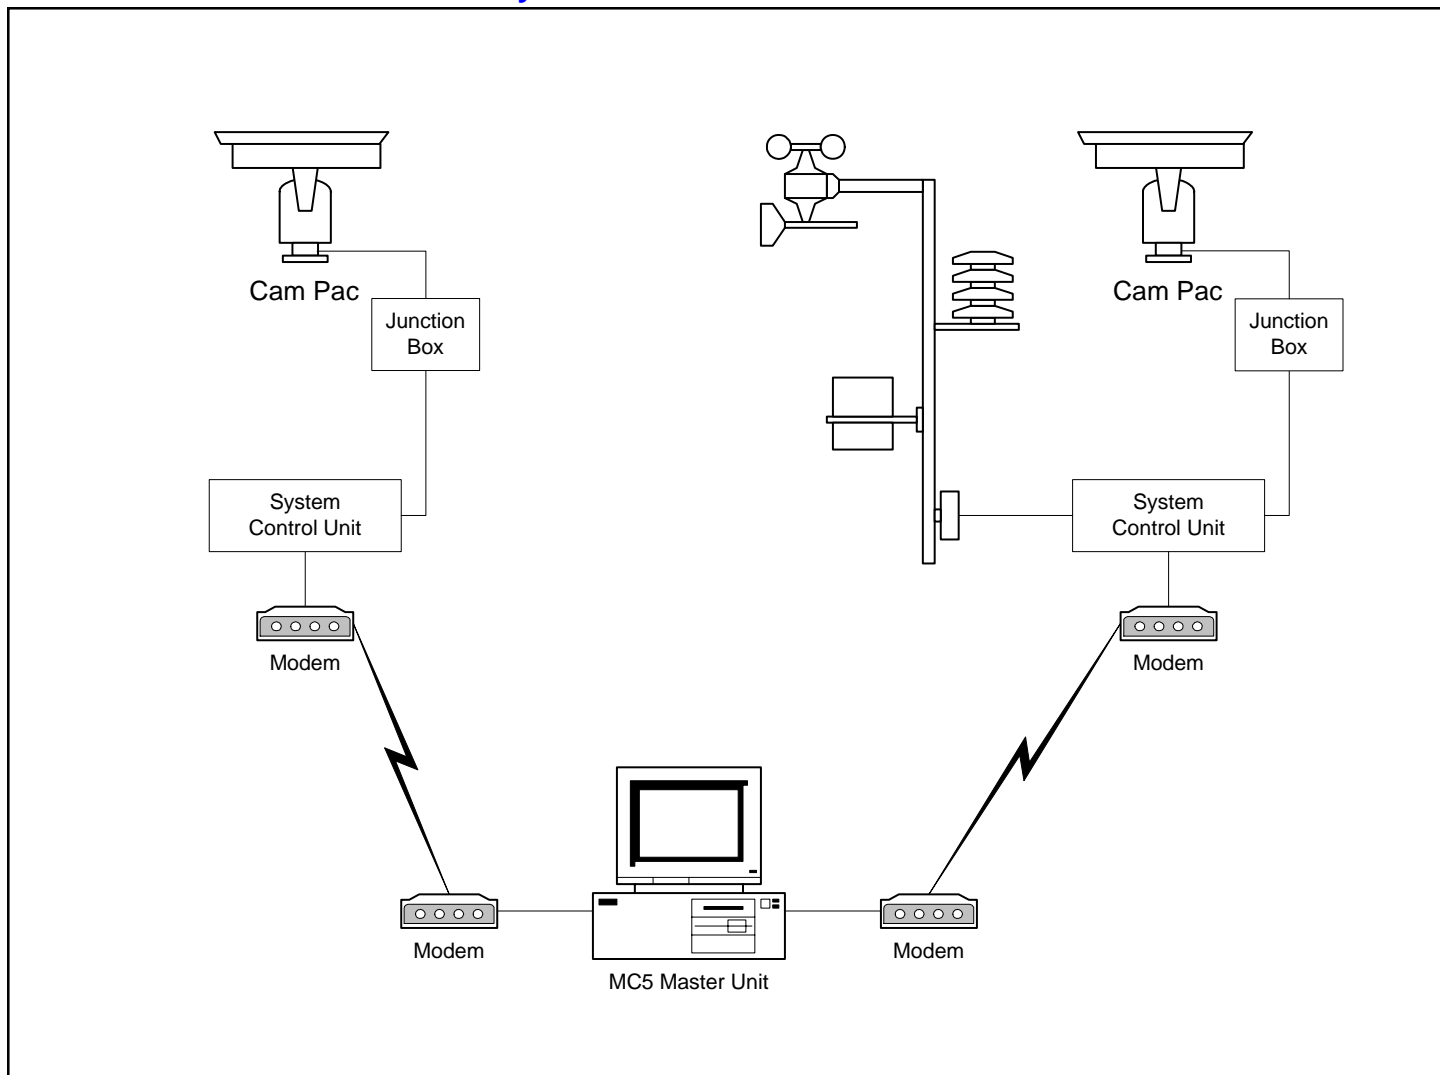

## Remote Camera System

The Cam Pac® features a heavy duty pan/tilt positioner to provide a stable camera platform. It offers multi-speed operation, which provides rapid movement between positions as well as slow movement for precision alignment. It is available with a thermostatically controlled heater blanket for reliable operation in cold environments.

The Cam Pac® camera enclosure includes a heater, blower, sun shroud and window wiper. It also features a forward opening lid that provides easy access to the camera and lens.

## Cam Pac® Remote Camera System

### Versatile Configurations

The Cam Pac® can be remotely controlled through a direct connection with the MC5 master unit at the same site or via modems to a remote location. In addition, the Cam Pac® system control unit can act as a communications hub with the MC5 master unit for the control of multiple devices at the remote site.

### System Control Unit

The system control unit provides on-site control of the Cam Pac® and provides the interface for the MC5 remote control.
